

Your pet's Holter monitor diary

Pet name:

Owner surname:

Start date and time:

Your pet has been fitted with a portable digital ECG recorder to assess their heart rate and rhythm for a period away from the clinic., usually 24 hours. Most pets are happy wearing the monitors and do not attempt to disturb it, however, please watch your pet carefully and let your vet know if you are concerned they may interfere with the monitor overnight. They will be able to provide an appropriate collar they can wear if needs be. The monitor **is not waterproof!** Please ensure your pet does not swim whilst wearing the monitor, and avoid the vest getting too wet or muddy as this may cause discomfort.

Please complete the diary below for events such as feeding, exercise, excitement, medications. If your dog should suffer a collapse episode whilst wearing the monitor please mark this on the diary. In the comments, please note any clinical signs/symptoms your pet may display.
